DETAILED ACTION

Page 4, line 13, of the specification refers to "silicide 16a." This should probably read --silicate 16a--, as in lines 5 and 6. (?) The claims seem to recite that it is the silicate that is selectively removed, rather than the silicide.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fatula, Jr. et al.

With respect to claim 1, figure 2 of the reference shows metal silicide layer 16 (column 3, line 16), which is converted to metal rich silicon oxide (column 3, line 28). Metal rich silicon oxide would be metal silicate, because it is a compound of silicon, oxide, and metal. Alternatively, it would have been obvious to form metal silicate by oxidation of metal silicide, because oxidation of metal silicide is what is taught at column 3, lines 20-32, of the reference. The reference then teaches to etch the metal rich silicon oxide with an etchant that is selective to metal rich silicon oxide (abstract, last line). With respect to claims 2-3, column 3, lines 33-34, teaches to etch with HF solution, where room temperature is understood, or, alternatively, obvious because of simplicity of the processing. With respect to claims 4-5, known oxidizing environments

would have been obvious in view of the reference teaching of the need for such at column 3, lines 13 et seq.

Allowable Subject Matter

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 7-11 and 17-27 are allowed.

Conclusion

Applicant's remarks have been considered, but the Fatula references teaches an etchant which is selective to metal rich silicon oxide (which would be metal silicate) as compared to normal SiO_2 , which would meet the claim language of "an etchant that is selective to metal silicate."

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 2811

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
